

REDUCE THE RISK OF REAR-END COLLISIONS BY **UP TO 34%***

The Federal Motor Carrier Safety Administration (FMCSA) has granted tank trailer operators the ability to install brake-activated pulsating lamps on the rear of their trailer in order to increase visibility and reduce the risk of rear-end collisions.

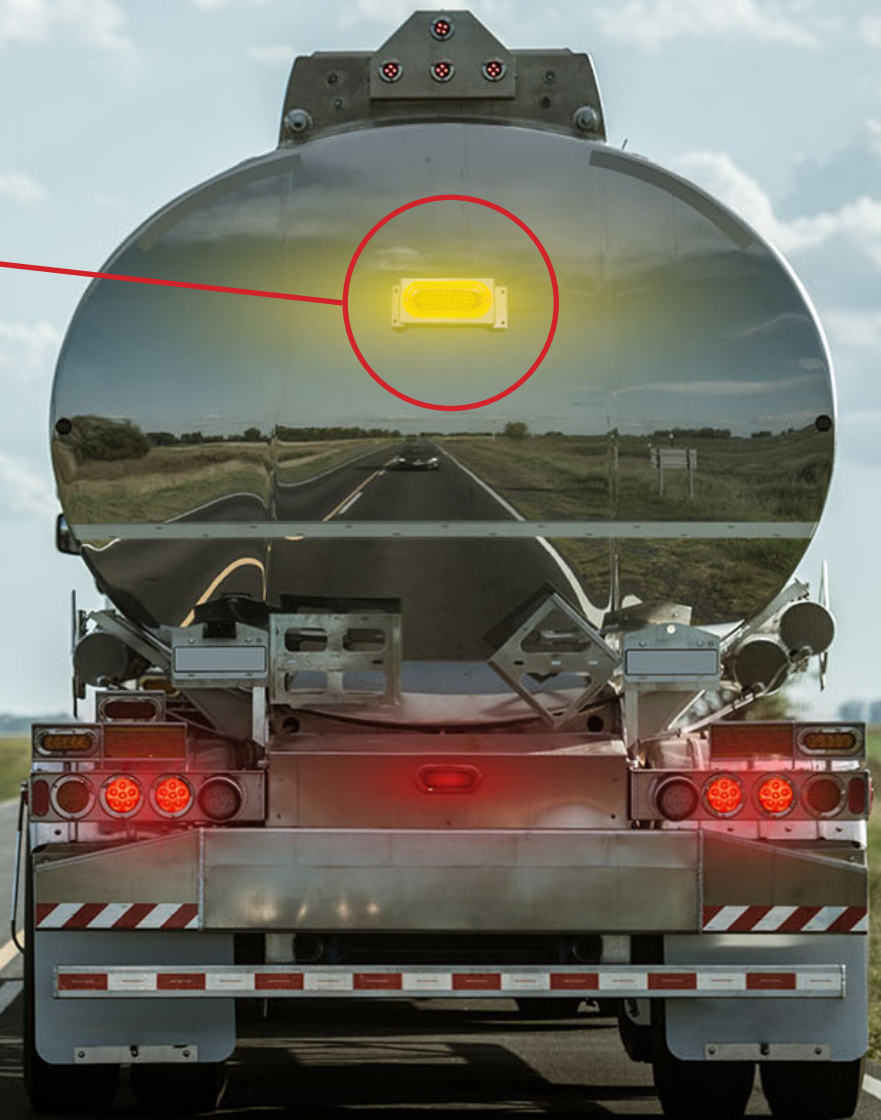

Used in addition to traditional tail lamps, Truck-Lite's variety of amber and red strobes provides the visibility and durability you need to take advantage of this new ruling – and help keep your fleet safer on the road.
